AFB Culture Test Report

www.LabTestsGuide.com - www.LabTestsGuide.net

Microbiology

Specimen

- Sputum/Fluid

AFB Smear

(Z-N or Auramin or Kinyoun Stain)

- No AFB Seen (Negative)

Culture Growth 1

This is the Initial Report

No AFB Isolated after 3 Weeks at 37°C

Culture Growth 2

This is the Final Report

No AFB Isolated after 6 Weeks at 37°C

Interpretation: Negative AFB culture indicates no viable mycobacteria were detected in the specimen after 6 Weeks at 37°C.

Methodology:

- Specimen decontaminated and concentrated.
- Inoculated onto Lowenstein-Jensen (LJ) medium.
- Incubated at 37°C for up to 8 weeks.
- Weekly observation for colony growth.

Clinical

Significance:

- Suggests absence of active tuberculosis in the tested specimen.
- Must be correlated with clinical signs and other investigations.
- Repeat testing may be needed if strong clinical suspicion exists.

Limitations:

- False negatives possible due to low bacterial load or improper specimen handling.
- Some mycobacteria may require specialized media or prolonged incubation.
